

To whom it may concern,

Z-Labs conducted a black box pentest against the Web Survey Creator Application owned by Dipolar Pty Limited to assess and identify security risks and vulnerabilities that could compromise the confidentiality, integrity, and availability of the application and its underlying IT infrastructure. The pentest was conducted in February 2026.

The pentest was a combination of manual and automated assessments of the application and its functionality. The scope of testing included all the functionality available to unauthenticated and authenticated users. To make sure that the whole attack surface of the application was sufficiently covered, the Z-Labs team followed OWASP Application Security Verification Standard during the testing. The pentesters relied on tools to guide the first wave of testing, followed by manual testing to provide an accurate and in-depth analysis.

As the pentesting team identified vulnerabilities, they reported all of these issues to Dipolar Pty Limited for remediation.

Sincerely,
The Z-Labs Team
